

Joey Direct

Powerful CommBox software that allows you to build your own customised control panel that can run on a windows PC and then directly control any CommBox processor via serial port.

Based on the powerful yet simple Joey authoring software, Joey direct can be built to any size or screen resolution. Build a control panel with no limitation to screens, colours or macro capability.

Joey Direct allows you to control any of the CommBox processors from a windows machine, meaning you can utilise existing equipment rather than installing a separate control panel in the room.

Include your logo, instructions and help pages.

Panel Type: Runs on existing windows PC Runs on existing windows PC
