

# Media Controller Micro

Video decoder – Converts digital video and audio to an analogue signal for playback/digital signage on display devices such as plasma, projectors or other displays..

The ZVC0120 Media Controller is designed for applications where a projector, plasma display panel or video monitor is used to display content from a DVC network, with no PC.

Digital video formats are constantly evolving, so the ZVC0120 is designed to evolve with the technology. Each set top box in your system will be automatically upgraded over the internet as new formats appear or new functionality is added.

<b>Case</b>	Standard ITX board case. Metal.
<b>Power Supply</b>	12v/5A external power supply
<b>Dimensions</b>	220H x 420W x 660D mm
